

Cooking Instructions for Your Frozen K17 Pan Pizza!

Ovens vary, and you know yours best, so don't forget to take into consideration if yours runs a little hot or cold!

We recommend that you thaw your pizza before cooking (An hour to an hour and a half out of the freezer or overnight in the fridge should do the trick!). Preheat your oven to 400 F. Remove all packaging and place pizza on a cookie sheet or sheet pan---or even better, a pizza pan if you have one.

Once your oven is preheated, place the pizza in the oven and cook for approximately 23-27 minutes. Check every 3-5 minutes once it reaches minute 23 to ensure it doesn't go too far!

Cooking times can vary by the amount of the ingredients---if your pizza is loaded, it will take a little longer to cook. You can also cook from deep freeze but expect an additional 3-8 minutes of cook time, and the crust might be a little crunchier!

Best and with love,
Kitchen 17

PS - if you are feeling like a pizza-pro and want to use a pizza stone, don't forget to preheat the stone with the oven before placing the pizza on it!

**Please use caution when Opening
Package. Extra dry ice may still be
present and can cause severe burns.
Avoid skin contact.**
